

Less time collecting waste, more time keeping Pittsburgh beautiful.

VICTOR STANLEY RELAY™

STREET LEVEL SENSING™ & WASTE CONTROL SERVICE

Relay technology has helped make Pittsburgh an even better place to live. Sensor-equipped waste bins send the city real-time data, monitoring everything from fullness to street-level conditions. Now that crews can optimize their collection routes, a job that once required 25 people now only takes 9. Allowing workers to focus on other pressing tasks, including street repairs, cleaning up vacant lots, and improving street-level conditions in disadvantaged areas.

What can we do for your city?
